

NordOil Group

Integrated Supply Chain Operations Report — Europe to Middle East & Asia

Executive Overview

NordOil Group, headquartered in Rotterdam, Netherlands, operates one of Europe's most extensive integrated hydrocarbon supply chains, connecting upstream production assets in the North Sea with refining, trading, and distribution networks spanning the Arabian Gulf and Southeast Asia. The group maintains contractual and operational ties with state-owned enterprises, independent refiners, logistics providers, and port authorities across more than fifteen countries. This report outlines the principal actors, operational flows, and interdependencies that constitute the NordOil supply chain as of the second quarter of 2026.

Upstream Production and Origination

The origination phase of the supply chain begins at NordOil's upstream subsidiary, NordOil Exploration AS, which is registered in Oslo, Norway, and holds majority stakes in three producing fields on the Norwegian Continental Shelf — the Balder Extension, the Alvheim satellite, and the Grane field. NordOil Exploration AS operates these assets under licenses granted by the Norwegian Ministry of Petroleum and Energy and maintains a 30-year framework agreement with Equinor ASA for the shared use of offshore processing facilities.

Crude lifted from Grane and Balder is classified as Oseberg Blend, a light, sweet crude with an API gravity of approximately 40 degrees. This grade is particularly sought after by complex refiners in the Middle East and Asia-Pacific due to its high naphtha yield and low sulphur content. NordOil Trading BV, the group's Geneva-registered trading arm, holds the title to lifted cargoes and is the named seller in all term contracts and spot transactions. The trading entity maintains ISDA master agreements with six European banks — ABN AMRO, BNP Paribas, Societe Generale, ING Bank, Rabobank, and Commerzbank — and uses these credit lines to finance cargo purchases and hedge price exposure through Brent futures on the Intercontinental Exchange.

Marine Transportation and Logistics

Once cargoes are nominated and loaded at the Sture crude oil terminal in Hordaland, Norway, or the Kaarstoe processing plant, they are handed over to the marine transportation layer of the supply chain. NordOil has a long-term time-charter agreement with Nordic Tankers A/S, a Copenhagen-based

shipowner, covering four Suezmax vessels — the MT Stavanger Spirit, MT Oslo Star, MT Bergen Voyager, and MT Trondheim Falcon. Each vessel is flagged in the Marshall Islands and holds a certificate of class issued by DNV SE, the Norwegian classification society. All four tankers are enrolled in the Ship Energy Efficiency Management Plan programme and report voyage data to the European Maritime Safety Agency in compliance with MRV regulations.

For voyages to the Arabian Gulf, the standard route transits the English Channel, passes the Strait of Gibraltar, crosses the Mediterranean to the Suez Canal, and enters the Red Sea before reaching the Gulf of Oman. The Suez Canal Authority levies transit dues on each vessel based on net tonnage; NordOil's average transit cost per Suezmax voyage is approximately USD 650,000. The Suez Canal Authority is therefore a critical infrastructure operator within the supply chain, as any suspension of transit — as occurred in March 2021 — directly affects cargo delivery schedules and demurrage liability. For voyages to Southeast Asia, vessels proceed around the Cape of Good Hope or, where draught permits, continue through the Strait of Malacca.

Receiving Terminals and Port Operations — Middle East

The primary receiving counterparty in the Middle East is Khaleeji Refining Company (KRC), a joint venture incorporated in Abu Dhabi, United Arab Emirates, with ownership split between the Abu Dhabi National Oil Company (ADNOC) at 51 percent and NordOil Group at 49 percent. KRC operates the Ruwais West refinery, which has a nameplate capacity of 420,000 barrels per day and is equipped to process light sweet crudes into Euro-V specification transportation fuels, jet fuel, and petrochemical feedstocks. NordOil supplies KRC with approximately 80,000 barrels per day of Oseberg Blend under a five-year off-take agreement signed in January 2023, renewable annually thereafter.

Vessels discharge at Ruwais Marine Terminal, which is managed by the Abu Dhabi Ports Company (ADPC). ADPC assigns berth windows, performs vessel vetting under the Oil Companies International Marine Forum (OCIMF) Ship Inspection Report (SIRE) programme, and issues port clearance in coordination with the UAE Federal Authority for Nuclear Regulation for any vessels that have previously called at Iranian ports within the preceding twelve months. After discharge, title of the crude transfers from NordOil Trading BV to KRC upon completion of an independent inspection certificate issued by SGS Gulf Ltd., the appointed cargo surveyor.

A secondary receiving point in the region is the Fujairah oil terminal, operated by Vopak Terminals Fujairah BV, a subsidiary of Royal Vopak NV. NordOil leases three storage tanks at this facility with a combined capacity of 450,000 cubic metres, which serve as a regional hub for blending, re-exporting, and short-term inventory management. The Fujairah terminal is connected by a subsea pipeline to the Emirates National Oil Company's (ENOC) jetty infrastructure, enabling inter-terminal transfers without additional vessel movements.

Receiving Terminals and Port Operations — Asia

In Asia, NordOil's primary off-take partner is Sinopec Zhoushan Petrochemical Co., Ltd., a wholly owned subsidiary of China Petroleum and Chemical Corporation (Sinopec), located in Zhoushan, Zhejiang Province, China. Sinopec Zhoushan operates a greenfield refinery commissioned in 2022 with a crude processing capacity of 300,000 barrels per day, with a design optimised for light sweet crudes from the North Sea and West Africa. NordOil Trading BV supplies this facility with approximately 40,000 barrels per day on a spot and short-term contract basis, with nominations typically confirmed 60 days before the cargo arrival window.

Cargoes destined for Sinopec Zhoushan are discharged at the Yongzhou deepwater berth, which can accommodate vessels up to 300,000 deadweight tonnes. Port agency services are provided by Sinotrans Shipping Ltd., which also coordinates with the General Administration of Customs of China for bill of lading endorsement, import quota verification, and advance cargo manifest submission. A second Asian destination, used primarily during periods of arbitrage opportunity, is the Singapore Petroleum Company (SPC) refinery on Jurong Island, Singapore. SPC is a wholly owned subsidiary of PetroChina International (Singapore) Pte. Ltd. and purchases cargoes on a delivered ex-ship basis, with demurrage risks retained by NordOil Trading BV.

Financial and Insurance Counterparties

The financial architecture underpinning NordOil's supply chain involves several specialised institutions. Trade finance for each cargo is structured as a documentary letter of credit issued by Standard Chartered Bank plc out of its Dubai branch, with ABN AMRO Bank NV acting as the confirming bank on the European side. Each letter of credit is backed by the relevant bill of lading, certificate of origin, and SGS inspection report. Payment terms are net thirty days from the bill of lading date for KRC and net forty-five days for Sinopec Zhoushan.

Risk Management and Compliance Framework

NordOil Group's supply chain is subject to a multi-layered regulatory and compliance framework. At the European level, the group's upstream operations must adhere to the Norwegian Petroleum Act administered by the Petroleum Safety Authority Norway (PSA), which conducts periodic audits of NordOil Exploration AS's safety management systems. The group's trading operations are regulated by the Dutch Authority for the Financial Markets (AFM) and, for commodity derivatives, by the European Securities and Markets Authority (ESMA) under the European Market Infrastructure Regulation (EMIR). NordOil Trading BV is a registered trade repository participant with DTCC Data Repository (UK) Ltd. and reports all OTC derivatives positions on a daily basis.

Sanctions compliance is managed centrally by the NordOil Group Legal and Compliance team in Rotterdam, which maintains a real-time screening database integrated with feeds from the Office of Foreign Assets Control (OFAC), the UK Office of Financial Sanctions Implementation (OFSI), and the European Union Consolidated Sanctions List. All vessels nominated for NordOil voyages are screened against the Maritime Anti-Corruption Network (MACN) database and the Equasis vessel information system. NordOil's P&I insurance is provided by the UK P&I Club, a member of the International Group of P&I Clubs, covering third-party liability, pollution, and crew injury across all chartered tonnage. Cargo insurance is placed through AON Risk Solutions on the Lloyd's of London market.

Technology and Data Infrastructure

The operational data backbone of NordOil's supply chain is provided by the Eka Commodity Management platform, hosted on Microsoft Azure in the West Europe region. This system integrates with the SAP S/4HANA ERP deployed at the Rotterdam headquarters, enabling end-to-end visibility from cargo nomination through to invoice settlement. Real-time vessel tracking is provided by MarineTraffic Pro API, with AIS position data consumed by the scheduling team every fifteen minutes. Port call data and laytime calculations are managed through Q88 vessel management software, which also stores the vetting records and pre-arrival notification forms for all four chartered tankers.

The operational technology layer at the Ruwais refinery is managed jointly by KRC's IT department and Honeywell Process Solutions, which provides the distributed control systems and historian software underpinning the refinery's crude unit, vacuum distillation unit, and hydrocracker operations. Data from Ruwais is shared with NordOil's Rotterdam trading desk via a secure VPN tunnel with certificate-based authentication, allowing the trading team to monitor crude throughput and product yields in near real-time and align re-export nominations with refinery run rates.

Strategic Outlook and Partnership Development

Looking ahead, NordOil Group is pursuing two strategic initiatives that will deepen the supply chain relationships described in this report. The first is the proposed acquisition of a 25 percent equity stake in the Duqm Refinery and Petrochemicals Industries Company LLC (DRPIC) in the Sultanate of Oman, jointly owned by OQ (formerly Oman Oil Company) and Kuwait Petroleum International. If completed, this transaction would give NordOil a physical offtake right of approximately 50,000 barrels per day of refined products from the Duqm facility, complementing its existing Ruwais offtake and creating a second point of crude delivery in the Arabian Sea.

The second initiative involves the establishment of NordOil Asia Pte. Ltd., a new Singapore-incorporated subsidiary that would assume the commercial origination and trading functions currently performed by NordOil Trading BV for all cargoes destined for East and Southeast Asia. This entity would enter into direct term contracts with Sinopec, as well as with PTT Global Chemical Public

Company Limited of Thailand and PT Pertamina (Persero) of Indonesia, both of which have expressed preliminary interest in receiving North Sea crude on a term basis. NordOil Asia Pte. Ltd. is expected to be licensed by the Monetary Authority of Singapore as a Major Exporter under the Petroleum Trading Licence framework by the end of 2026.

This document is prepared for internal demonstration and knowledge-graph pipeline testing purposes. All contractual figures and operational details are illustrative. NordOil Group — Rotterdam, June 2026.
